

VitalityInvest ESG Risk Optimiser 3 fund.

Series F.

Fund factsheet | September 2021

This fund is eligible for the following product feature:

Risk ratings:

Fund objective

The fund is designed to deliver long-term returns through income and capital growth while remaining within a pre-determined target risk profile. Where possible, the fund aims to take into account environmental, social and governance (ESG) considerations. For example, it does this through exclusions which aim to limit investment in companies which may do harm or by investing a greater proportion of the fund in companies with higher ESG ratings.

The fund will primarily invest in a diversified portfolio of mainly index-tracking funds across a number of asset classes.

These asset classes may include shares (equities), bonds, property, money market instruments and bank deposits.

The fund is likely to have mainly lower-risk investments such as cash, cash-type assets and bonds and a minority of higher-risk investments such as UK and overseas equities.

Risk profile

This Fund's target risk profile is a 3 on a scale of 1 (lowest) to 10 (highest). This scale is defined independently by Distribution Technology (DT) within their Dynamic Planner system. The Fund's allocation to each asset class is managed to ensure that the Fund remains within its target risk profile. Asset allocation input is provided by DT based upon their research and analysis of the long-term historical returns and volatility of each asset type. Dynamic Planner is the brand name of the software system used by DT to generate the risk band that the Fund will aim to stay within. Each risk profile is defined by a target risk band, with risk defined as a fund's expected volatility of returns.

Volatility is a measure of the ups and downs of the performance of a fund. The higher the volatility, the more uncertainty there is in the returns.

Cumulative performance graph

Value of £1,000 invested, September 2018 to September 2021, net of fees*

* Please note that this performance data includes simulated past performance¹ up to 30 December 2020. Source: VitalityInvest

Simulated past performance and past performance should not be taken as a guide to the future performance and there is no guarantee that this investment will make profits: losses may be made. Launch date: 30 December 2020

Historical performance

As of 30 September 2021, net of fees

Period	Fund performance
1 month	-1.5%
3 months	0.9%
6 months	3.5%
Year to date	2.0%
1 Year	4.5%
3 Years [†]	6.2%
Since launch*	1.8%

Annual performance

12 months to 31 December

2016	7.8%
2017	4.2%
2018	1.2%
2019	10.5%
2020	8.4%

* Launch date: 30 December 2020

[†] Data has been annualised. Annualised figures are the equivalent returns received year on year over a specific term that would provide the same total return over the term as has been experienced. Source: VitalityInvest

Total 100%

¹ Simulated past performance has been constructed using historical asset allocations provided by DP with the same asset classes and underlying holdings in which the funds are currently invested, or equivalent indices where the underlying strategies were launched after the start date of the simulated past performance. Daily rebalancing to the historical asset allocations has been applied. The simulated past performance is reported net of current fees. Source of data for underlying holdings: Morningstar

Key risks

General risks

The value of these investments, and any income generated from them, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. Past performance should not be taken as a guide to the future performance. The Fund's objectives will not necessarily be achieved and there is no guarantee that these investments will make profits; losses may be made. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term.

Specific fund risks

Charges from capital: Expenses are charged to the investment. This could constrain future growth.

Currency exchange: Changes in the relative values of different currencies may adversely affect the value of investments.

Default: There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivative counterparty: A counterparty to a derivative transaction may fail to meet its obligations thereby leading to financial loss.

Derivatives: The use of derivatives may increase overall risk by magnifying the effect of both gains and losses. This may lead to large changes in value and potentially large financial loss. Although the Fund does not invest in derivatives directly, the underlying holdings of the Fund could gain exposure to asset classes through the use of derivatives.

Emerging markets: These markets carry a higher risk of financial loss than more developed markets as they may have less developed legal, political, economic or other systems.

Equity investment: The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Government securities exposure: The portfolio will invest in government securities issued or guaranteed by a permitted single state.

Interest rate: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates and/or inflation rises.
