

VitalityInvest Ninety One Global Equity Growth Fund

Series F.

Fund factsheet | September 2021

This fund is eligible for the following product feature:

Healthy Living Discount

Risk ratings:

Fund objective

The Fund aims to provide long-term capital growth.

The Fund invests around the world primarily in the shares of companies. The Fund focuses investment on companies deemed by the Investment Manager to be of high quality i.e. companies which have provided sustainably high levels of return on invested capital and free cash flow (a company's cash earnings after its capital expenditures have been accounted for), typically those associated with global brands or franchises.

The Fund may invest in other assets such as cash, other funds and derivatives (financial contracts whose value is linked to the price of an underlying asset).

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Any income due from the fund is reflected in the value of units rather than being paid out.

Cumulative performance graph

Value of £1,000 invested, 01 October 2018 to 30 September 2021, net of fees*

* Please note that this performance data includes simulated past performance of the actual past performance of the underlying Ninety One fund, Ninety One Diversified Income. While the VitalityInvest Ninety One Multi-Asset Income Fund launched on 29 May 2018, the Ninety One Diversified Income Fund launched on 02 January 2013. Source: VitalityInvest and Morningstar

Past performance should not be taken as a guide to the future performance and there is no guarantee that this investment will make profits: losses may be made.

Historical performance*

As of September 2021, net of fees

Period	Fund performance
1 month	-2.1%
3 months	1.9%
6 months	11.9%
Year to date	13.2%
1 Year	16.6%
3 Years [‡]	12.3%
Since launch [‡]	14.2%

Annual performance*

12 months to 31 December

2016	20.8%
2017	14.0%
2018	1.5%
2019	23.1%
2020	11.1%

‡ Data has been annualised. Annualised figures are the equivalent returns received year on year over a specific term that would provide the same total return over the term as has been experienced. Source: VitalityInvest and Morningstar

Key risks

General risks

The value of these investments, and any income generated from them, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. Past performance should not be taken as a guide to the future performance. The Fund's objectives will not necessarily be achieved and there is no guarantee that these investments will make profits; losses may be made. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term.

Specific fund risks

Charges from capital: Expenses are charged to the investment. This could constrain future growth.

Currency exchange: Changes in the relative values of different currencies may adversely affect the value of investments.

Default: There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivative counterparty: A counterparty to a derivative transaction may fail to meet its obligations thereby leading to financial loss.

Derivatives: The use of derivatives may increase overall risk by magnifying the effect of both gains and losses. This may lead to large changes in value and potentially large financial loss. Although the Fund does not invest in derivatives directly, the underlying holdings of the Fund could gain exposure to asset classes through the use of derivatives.

Emerging markets: These markets carry a higher risk of financial loss than more developed markets as they may have less developed legal, political, economic or other systems.

Equity investment: The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Government securities exposure: The portfolio will invest in government securities issued or guaranteed by a permitted single state.

Interest rate: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates and/or inflation rises.

Additional features available when using the VitalityInvest product wrappers
